

Dashboard 3 – Refurbishment & Customer Analytics:

This dashboard provides an overview of the organization's refurbishment operations and customer experience across different product categories. It helps evaluate how efficiently products are being refurbished, the cost associated with refurbishment, customer satisfaction, repair requirements, and return behaviour.

The dashboard combines operational and customer-focused metrics to identify **high-performing categories, costly refurbishment areas, customer satisfaction patterns, and yearly refurbishment trends**. The interactive purchase-date filter also allows users to analyze these insights for a selected period.

Dashboard 3 – Image Overview:

Key outcomes from the dashboard:

- Fashion has the highest refurbishment rate at **40.2%**, while Gaming has the lowest at **35.8%**.

- Laptops (**₹6.2M**) and Smartphones (**₹5.5M**) account for the highest total refurbishment costs.
- The overall customer rating is **3.87/5**, indicating generally positive customer satisfaction.
- The dashboard shows a relationship between repair count and customer rating, with higher repair requirements generally associated with lower customer satisfaction.
- Only **6.69% of transactions are returned**, while **93.31% are not returned**.
- Gaming records the lowest customer rating among the product categories, indicating an area that may require further attention.
- The yearly ribbon chart highlights how the **refurbishment ranking of product categories changes from 2021 to 2025**.
